**TIL**

The industry's leading technology hub for trade ideas

# Trade Ideas Limited ("TIL") launches new APIs
3rd January 2011

TIL has developed and made available two new Application Program Interfaces (APIs) for use by service participants.  These are:

A "push" API using SOAP web service technology, which supports the real time delivery of trade idea messages to recipient systems. This API also supports two way communication flows as it includes the ability to return an acknowledgement of each idea to the system from which the idea originated.

A "FIX" derived Push API ( Conforming to FIX standard 4.2) which uses a number of standard FIX message / field types to provide real time delivery of idea messages to recipient systems and the management of acknowledgements.

These new APIs are in addition to the original "Pull" API enabling recipient systems to poll the TIL Hub when required and pull down idea messages waiting for them.

If you would like further information about these new APIs and how they might assist you, please contact:
